Advanced & Best Technologies

Advanced & Best Technologies Pte Ltd (ABT) is working under the umbrella of A&B Group Singapore since 2001. ABT has planned, designed and implemented software solutions that not only meet our clients' needs, but also exceed their expectations. Some might say our impressive track record is the result of technical knowledge and experience, and that's true-but it's only part of the story.

We believe successful software projects & products also require a committed, long-term partnership. That's why you'll find our team of professionals as well versed in the art of interpersonal communication and problem solving as they are in the language of technology. The result is a collaborative approach-including the direct involvement of ABT principals-that shapes our project management methodology, rigorous quality assurance, and customer involvement.

ABT is an authorized Microsoft® Certified Partner. And recently has granted Microsoft IWC certification from Microsoft. This means that ABT has been recognized by Microsoft® for our expertise and that we have been authorized by Microsoft to sell, service, host and support a complete range of Microsoft products.

Microsoft® Certified Partners are independent companies that offer their clients leading-edge technology through consulting, deployment, remote and on-site maintenance, helpdesk support, packaged software applications, training, and more. Microsoft Certified Partners encompass a broad range of expertise and vendor affiliations and have experience ranging from networking, e-commerce, collaboration, business intelligence, and other leading edge disciplines.

Being a Microsoft® Certified Partner we ensures you that our staff are trained and qualified to work with the products that we support, delivering the best solutions to you in a professional and effective way. Our staff has passed rigorous tests developed by Microsoft to ensure that our staff has met Microsoft's high standards.

1 | OUR PRODUCTS

2 | OUR SERVICES

 CUSTOM SOLUTIONS	Corporate, Government , Industrial, Small business
 CONSULTING AND DESIGN	System analysis, requirement definition, software architecture
 SOFTWARE CONSTRUCTION	Planning, tracking, programming, quality assurance
 WEB APPLICATIONS	Website development, e-commerce, intranet application
 DATABASE APPLICATIONS	SQL Server, Oracle, Access, and others
 SMALL PLATFORM DEVELOPMENT	Embedded systems, handheld and mobile devices
 PRODUCT DEVELOPMENT	Shrink-wrapped and vertical market product development
 STAFFING SERVICES	Technical / Project staffing

CUSTOM SOLUTIONS:

ABT has a proven track record of developing custom software solutions for corporate, industrial, small business and government clients. We can help you create software solutions tailored to your specific needs ... solutions that fit the way you want to run your business. If software development is a key area in the future for your company, ABT offers you the knowledge and experience to design, construct, and implement your projects effectively.

- Corporate, government, industrial, small business
- Stand-alone and networked desk-top applications
- Web-based applications
- Database design and development
- User interface design
- Reporting
- Systems integration
- Data interchange
- Legacy system integration and migration

CONSULTING & DESIGN:

Systems Analysis/Business Process Analysis

Our staff has years of experience in a broad range of industries. We can work with your staff to review your current systems, procedures, and goals and to help you identify opportunities for improvement through the application of information technologies. We can also assist you in locating and evaluating commercially available packages and in weighing their costs and benefits relative to creating a tailored solution.

Some of our areas of experience are:

Accounting

Banking

Insurance

Government

Manufacturing

Medical & Pharmacy, Shop Management ,Telecommunications And Others ...

SOFTWARE CONSTRUCTION:

Creating great software takes more than skill and expertise. Like building a house, a successful software development project requires resource planning, progress reporting and change management. ABT utilizes proven software engineering practices to deliver software on time and on budget. Our software construction methodology includes:

Resource Planning

Project Scheduling and Timeline Development

Project Tracking and Reporting

Client involvement

Change Management

Design and Code Reviews

Source Code Management

Standards and Procedures

Quality Assurance

Technical Documentation

User Documentation

Implementation and Deployment

Technical Support

WEB APPLICATIONS:

ABT offers a full range of web development services - from simple, static "web brochures" to e-commerce solutions. We have extensive experience in the development of corporate intranet applications using a variety of "back-end" database and server platforms. We can help you design and develop new web-based applications, convert existing networked desktop applications to intranet applications, or create web-based interfaces to your legacy systems.

Web Site Design

Web Application Development

Web-based Reporting

Intranet Application Development

E-Commerce

Web Services (.NET)

ASP, JavaScript, IIS, SQL Server, Commerce Server

Legacy systems integration

Legacy systems migration to web-based applications

DATABASE APPLICATIONS:

Information technology solutions often involve the storage and retrieval of data. A solid, well-engineered database design provides the foundation for a successful software development project. A poorly designed database increases overall development costs and can adversely impact the performance, scalability and future evolution of the application.

We believe that good database design begins with good requirements definition. We work with our clients to gain a thorough understanding of the meaning of the data to be stored as well as the processes to be modeled by the database application. ABT has extensive experience in creating database solutions tailored to the specific requirements of our clients -- from compact flat-file storage techniques to complex relational database solutions.

SQL Server

Oracle

Access

Client-Server Applications

Distributed N-Tier Application Architecture

Data Replication college selection and application process.

SMALL PLATFORM DEVELOPMENT:

Increasingly powerful yet small and inexpensive chip-sets are allowing "intelligence" and connectivity to be embedded into an ever-expanding array of devices. As we move into the "post-PC" or "ubiquitous computing" era, business and industry has the opportunity to expand their information systems beyond the desktop to handheld and mobile systems. ABT has the experience and expertise to help you take advantage of these emerging technologies.

Embedded Systems

Windows CE

Other handheld platforms

Wireless systems

RF technology

Integration with traditional systems

PRODUCT DEVELOPMENT:

Commercial product developers face a different set of requirements than developers of in-house applications. In-house applications typically only have to work in a limited number operating environments and address a relatively limited set of user expectations. Commercial products are often used in a wide range of system configurations and must meet the demands of many more users with diverse backgrounds and expectations.

Our experience includes shrink-wrapped "off-the-shelf" products, turnkey vertical market applications, and web-based applications marketed by application service providers. We can help not only in the development of your products, but also in marketing, packaging, distribution and support.

STAFFING SERVICES:

At ABT, we understand the important challenges confronting engineering and MIS managers. You are faced with frequent interruptions to support existing systems while trying to meet project deadlines and keep pace with today's technology.

ABT can be your productivity resource to bring new projects on line. ABT staff can work as part of your in-house development team providing additional resources for specific projects without increasing permanent staff.

Or we can manage the entire project for you - from design to construction to implementation and support - allowing you and your staff to focus on other priorities. When you are ready, the project can be transitioned to your in-house team for continued support and development. This is an excellent way for your staff to learn new technologies since the finished project provides real-world examples tailor-made for your particular development requirements.

Microsoft .NET

While we design and develop solutions using many different development environments and tools, our primary focus is on Microsoft platforms and especially the Microsoft .NET architecture. By allowing software applications to more easily work together over the Internet or corporate intranet, Microsoft .NET offers businesses the opportunity to increase profits and connect more effectively with customers, employees and vendors. The .NET Framework and Visual Studio .NET provide developers with powerful tools to efficiently create high quality applications and Web services while lowering IT costs.

Our staff has the experience and knowledge to design and develop software solutions that take full advantage of the .NET technologies including:

- ASP.NET, • VB.NET, • C#, • Visual Studio .NET, • ADO.NET,
- XML/SOAP, • SQL Server 2000, • Windows Server 2003

In addition to our .Net expertise, our staff has extensive knowledge and experience with a large variety development environments and programming tools. Here are some of our most frequently requested development areas:

Programming Languages

- C#, C++, C
- VB.NET, Visual Basic, VBA
- Java

Web Development

- Active Server Pages
- VB Script/Java Script
- Internet Information Server
- Commerce Server
- Site Server
- XML/XSL
- DHTML/HTML
- Cold Fusion
- Macromedia Flash
- Visual Studio/Visual Interdev

Databases and 4th Generation Languages

- SQL Server
- Oracle
- SYBASE
- MySQL
- Access
- ODBC, ADO, RDO, DAO

Other Development Tools and Components

- Microsoft OLAP Services
- COM+
- Crystal Reports
- Visual Source Safe
- Microsoft Project
- Microsoft Software Development Kit
- Microsoft Device Driver Kit
- Windows API
